MZUZU UNIVERSITY

INFORMATION AND COMMUNICATION TECHNOLOGY

MICROSOFT ACCESS EXERCISE

1. Launch Microsoft Access.
2. Create a database called **SUPPLIERS** in **My Documents.**
   Create a **table** in the **SUPPLIERS** database with the following fields:

   SupplierID
   Supplier
   Address1
   Address2

3. Define the Primary Key for the table. Save the table as **SUPPLIER.**
4. Enter data in the table as shown below.

SupplierID	Supplier	Address 1	Address 2
1	CompuCare	216 Fox Street	JOHANNESBURG
2	Silitek	236 Canyon Street	CAPE TOWN
3	Technicorp	114 Crouse Street	JOHANNESBURG

5. Create another **table** in the **SUPPLIERS** database with the following fields:

   ProductID
   SupplierID
   Product

6. Define the Primary Key for the table. Save the table as **PRODUCTS.**
7. Enter data as shown in the table below:

ProductID	SupplierID	Product
1	1	CPU
2	1	Screens
3	1	Keyboards
4	2	Computer paper
5	2	Mailing labels
6	2	Diskettes
7	3	Printers
8	3	Cartridges
9	3	Computer stands

8. Link the two tables you have created.

9. Create a Query that will list all products produced by the supplier with SupplierID 3. The products should be listed in ascending order. Show all fields. Save the Query as **Supplier 3.**
10. Design a form and subform based on the tables you have designed using the Form Wizard. Show all fields on the forms. Choose columnar layout and International style. Save the form as **Supplier information** and the subform as **Product Subform.**
11. Create a report using the Report Wizard for the **PRODUCTS** table. Include all the fields. Order the report in ascending order of **Product** and use the **Columnar** layout and **Casual** style. Save the report as **Products report.**
