MZUZU UNIVERSITY

INFORMATION AND COMMUNICATION TECHNOLOGY III

MICROSOFT ACCESS EXERCISE

EXERCISE 1

1. Launch Microsoft Access.
2. Create a database called **CARS**
3. Create the following **tables** in the **CARS** database:

   (i) A table called **Car information.** It should have the following fields:
   Reg No
   Model
   Engine capacity
   Year Made
   Colour
   Mileage
   Manufacturer
   Previous owners
   Price

   (ii) A table called **Job details** whose fields are:
   Job No
   Mechanic
   Reg No
   Price

4. Define the primary keys for **Car information** table and **Job details** table.
5. Link the two tables.
6. Enter the sets of data in the appropriate tables as shown in tables on page 3.

7. Create a Query that will list all vehicles made between 1983 and 1986. Your query should show the following fields: Reg No, Model and Year Made
8. Name the Query **Cars between 1983 and 1986.** Save the Query.
9. Create another Query that finds all vehicles that have the **Price** of more than 30000. Your query should show the following fields: Reg No, Model and Price
10. Name the Query **Cars more than 30000.** Save the Query.
11. Create another query that will prompt you to enter Reg No. of a car. Show all fields of the Car Information table.
12. Create a form and a subform based on the two tables using Form Wizard. Call the main table **frmjobs** and the subform **frmcars**. Save the form.
13. Create a report for each table using the Report Wizard. Name the reports **rptjobs** and **rptcars**. Use the following parameters:

    Select all fields
    Sort records in ascending alphabetical order Job No and Reg No
    Choose Tabular layout and Landscape orientation for both reports
    Choose Formal style

Car information table

Reg No	Model	Engine capacity	Year Made	Mileage	Colour	Manufacturer	Previous owners	Price
CZ379	QUATTRO	3500	1986	15086	MAROON	AUDI	2	67750.00
BJ123	250	2500	1983	57980	BLACK	VOLVO	3	27890.99
ZA34	WHIZZKID	970	1980	54666	BLACK	SUZUKI	6	30000.75
DA345	BLUEBIRD	2000	1985	28960	BLUE	NISSAN	4	38900.99
MC3456	TURBO	3500	1987	38790	BLACK	SAAB	1	12780.00
MJ345	VIVA	1300	1973	67500	BLUE	VAUXHALL	8	19500.45
LL789	TAGORA	2200	1984	59851	GREY	TALBOT	4	16700.90
BT678	ACCLAIM	1600	1982	31006	RED	TRIUMPH	3	14000.00

Job detail

Job No	Mechanic	Reg No	Price
1	JOHN	BT678	38900

6	KEITH	LL789	26000
2	RICHARD	MJ345	16500
7	JOHN	CZ379	21000
3	STEPHEN	BJ123	17000
8	JOHN	ZA34	79000
4	ALBERT	DA345	170000
9	STEPHEN	MC3456	24000
5	DAVID	MJ345	8900

EXERCISE 2

1. Launch Microsoft Access.
   Create a database called **Nyama** in **My Documents.**
   Create a **table** in the **Nyama** database with the following fields:
   TYPE
   BREED
   REF NO
   DAY
   TIME
   PREVIOUS VISITS

2. Define the Primary Key for the table. Save the table as **Ziweto.**

3. Enter data in the table as shown below.

TYPE	BREED	REF NO	DAY	TIME	PREVIOUS VISITS
D	POODLE	J120	WED	9:30	6
D	PERKINGESE	K345	TUE	12:00	10
D	BEAGLE	J900	SAT	16:00	4
D	ALSATIAN	S559	SAT	13:45	10
D	LABRADOR	J666	WED	15:00	2
C	SIAMESE	L912	SAT	9:00	12
C	PERSIAN	A519	WED	10:30	0
C	ABYSSINIAN	J335	FRI	10:00	8
C	TABBY	B222	FRID	17:45	12
B	PARROT	K933	THU	11:00	2
B	GOOSE	P210	FRID	18:30	0
B	COCKATIEL	L018	SAT	9:30	6
B	BUDGERIGAR	H777	SAT	11:00	5
O	RABBIT	L123	WED	12:30	2

4. Create another **table** in the **Nyama** database with the following fields:
   CUSTOMER ID
   LAST NAME
   INITIALS
   ADDRESS 1
   ADDRESS 2
   ADDRESS 3

5. Define the Primary Key for the table. Save the table as **Customer.**
6. Enter data as shown in the table below:

CUSTOMER ID	LAST NAME	INITIALS	ADDRESS 1	ADDRESS 2	ADDRESS 3
110	Kalua	Peter	Wongani Wholesale	Luwinga	Mzuzu 2
111	Bloggs	P	5 The Old Hope House	London	WC1
114	Russell	Jones	214 Central Avenue	London	NW2
143	Banda	Yoramu	Laws Sec School	Embangweni	Mzimba
211	Lungu	S	Chirani Stores	P/Bag 334	Zomba
215	Talina	K	2 Coronet Blvd	Caversham	MN
231	Smith	H.L	44 Sumit Road	Cadiff	CA3
267	Chirwa	Ben	Chipiku Stores	Box 2	Mulanje
299	Bmus	L	200 Hope Road	Westminister	WE2
999	Honde	Akimu	Blantyre Textiles	Box 95	Blantyre 8

7. You are told that the following customers have animals with the following reference numbers (REF NO):

   Rusell: J120
   L912
   L018

   Kalua: K345

   Bloggs: J900
   A519

   Honde: B222
   P210

   Lungu: H777
   L123
   K933

   Create a *foreign key* in the appropriate table and enter the information given.

8. Link the two tables you have created.

9. Create a Query that will list all animals whose appointment day (DAY) is SAT. Show all fields. Save the Query as **Appointment Saturday.**

10. Create another Query that will list all Animals that have more than 9 PREVIOUS VISITS. Show all the fields and list the records in descending order of DAY. Save the query as **Previous Visits Descending.**

11. Design a form and subform based on the tables you have designed using the Form Wizard. Show all fields on the forms. Choose Datasheet layout and International style. Save the form as **Mbuye** and the subform as **Chiweto.**

12. Create a report using the Report Wizard for the **Ziweto** table. Select all fields. Order the report in ascending order of TYPE and use the tabular layout and Corporate style. Save the report as **Ziweto Visits Report.**
