C do while loops

C do while loops are very similar to the while loops, but it always executes the code block at least once and furthermore as long as the condition remains true. This is an **exit-controlled loop**.

Example of a C Program to Demonstrate do while loop

Example:

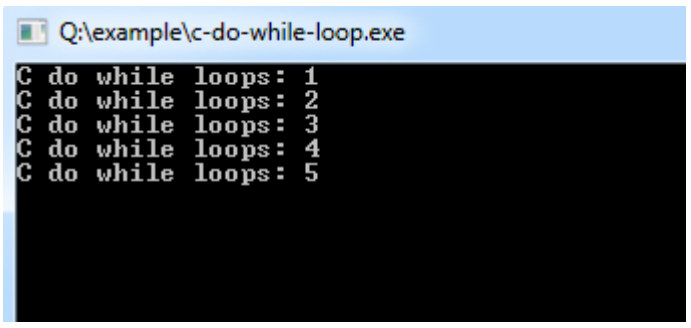

```
#include<stdio.h>

int main ()
{
   /* local variable Initialization */   int n = 1,times=5;

   /* do loops execution */   do
   {
       printf("C do while loops: %d\n", n);
       n = n + 1;
   }while( n <= times );

   return 0;
}
```
